

GRADE ANALYSIS

STAY PRODUCTIVE

Learning how to analyze where you are in a class is a valuable skill. This kind of analysis includes grades, sure, but it also involves reflection on your current study and practice strategies, how you plan your study sessions, what assignments you have left in the term, and how you can deliver your best work.

To get started, use this worksheet to calculate your current grade in a course. With this knowledge, you'll be in a good position to reflect on which study habits to keep and which to adjust/adapt.

<u>Course:</u>	Possible points to have earned so far:	
<u>Current Grade:</u>	Actual points earned so far:	
<u>Grade Goal:</u>	Current grade: (score from line 2 / score from line 1)	
	Total points available in the course:	
	Points needed to achieve goal grade: (total points x .00% of desired score)	
	# of points needed to earn goal grade:	

LOOKING BACK (reflection time):

1. Looking at graded tests/papers/other feedback, what's going well in the class?
2. Looking at graded tests/papers/other feedback, where is there room for improvement in the class?
3. Reflecting on your study habits and strategies, what's going well in your practice and work outside of class?
4. Reflecting on your study habits and strategies, what could be improved in your practice and work outside of class?

LOOKING FORWARD:

4. What kind of assignments will you be completing (and receiving points for) for the rest of the term?
5. What can you do to engage in your best work on these assignments? (Consider your strategies, your timing, your planning, your resources, etc.)
