

The DIY

DATE:

TOPIC(S):
Bonds &
Phase Diagrams

CLASS: CH 232

What are the main concepts in this lecture?

1. Types of Bonding
2. Influences of Vaporization
3. Phase Diagrams

References:

Table 11.4 (pg. 466)
Lecture 9

Each molec. has different types of bonds...

... which influences Vaporization/Fusion...

↑ VAPORIZATION RATE:

1. ↑ Temp.
2. ↑ Surface area
3. ↓ Strength of bond

VOCAB: VOLATILE
characteristic describing a liquid that vaporates easily

HEAT OF VAPORIZATION
amount of heat required to vaporize 1 mole of liquid

$$H_2O \ H_{VAP} = +40.7 \frac{kJ}{mol}$$

* Always positive/endothermic

$$\ln P_{VAP} = \frac{-\Delta H_{VAP}}{R} \left(\frac{1}{T} \right) + \ln B$$

Clausius-Clapeyron equation

FUSION:

$$H_2O \ H_{FUS} = -6.02 \frac{kJ}{mol}$$

* Always negative/exothermic

* Tends to be smaller than H_{VAP} for same molec.

... giving each molec. its own unique phase diagram.

SUBLIMATION CURVE
Transition between gas and solid

FUSION CURVE
Transition between solid and liquid

VAPORIZATION CURVE
Transition between liquid and gas

* **TRIPLE POINT**
exact condition where all three states are stable and in equilibrium. The three states coexist.

Δ **CRITICAL POINT**
Condition where gas and liquid coalesce to form supercritical fluid (11.5)

The Instruction Manual

<p>DATE:</p> <p>TOPIC(S): U-substitution</p> <p>CLASS: 252</p>	<p>What are the main concepts in this lecture?</p> <ol style="list-style-type: none"> 1. Basic u-Subs. 2. Recognizing Patterns 3. Chain Rule
<p>Problem Example:</p> $\int (3x^2 + 2x) e^{(x^3 + x^2)} dx$ <p>Recognize: exponent of e is coefficient +</p> $u = x^3 + x^2$ $dx \cdot \frac{du}{dx} = 3x^2 + 2x \cdot dx$ $\hookrightarrow du = (3x^2 + 2x) dx$ $\int \overbrace{(3x^2 + 2x) dx}^{du} \overbrace{e^{(x^3 + x^2)}}^u$ $\int e^u du = e^u + C$ <div style="border: 1px solid black; padding: 5px; display: inline-block;"> $= e^{x^3 + x^2} + C$ </div>	<p>Steps of the Problem:</p> <p>How are the exponents & coefficients related?</p> <p>Make a u variable that includes as much as possible</p> <p>pretend du/dx is a fraction, multiply both sides by dx - do this so you can <u>rewrite</u> the original problem easier</p> <p>Substitute u in the original formula</p> <p>Take a derivative as usual</p> <p>Substitute the original value back in derived answer</p>
<p>If I get stuck on this type of problem, review or check:</p> <ul style="list-style-type: none"> • unwind chain rule • what patterns do I recognize? • could I make it simpler? 	<p>Questions to Ask:</p> <p>what do I do if u does not exactly equal du?</p> <p>Could you do this with multiple variables?</p>

The Matrix

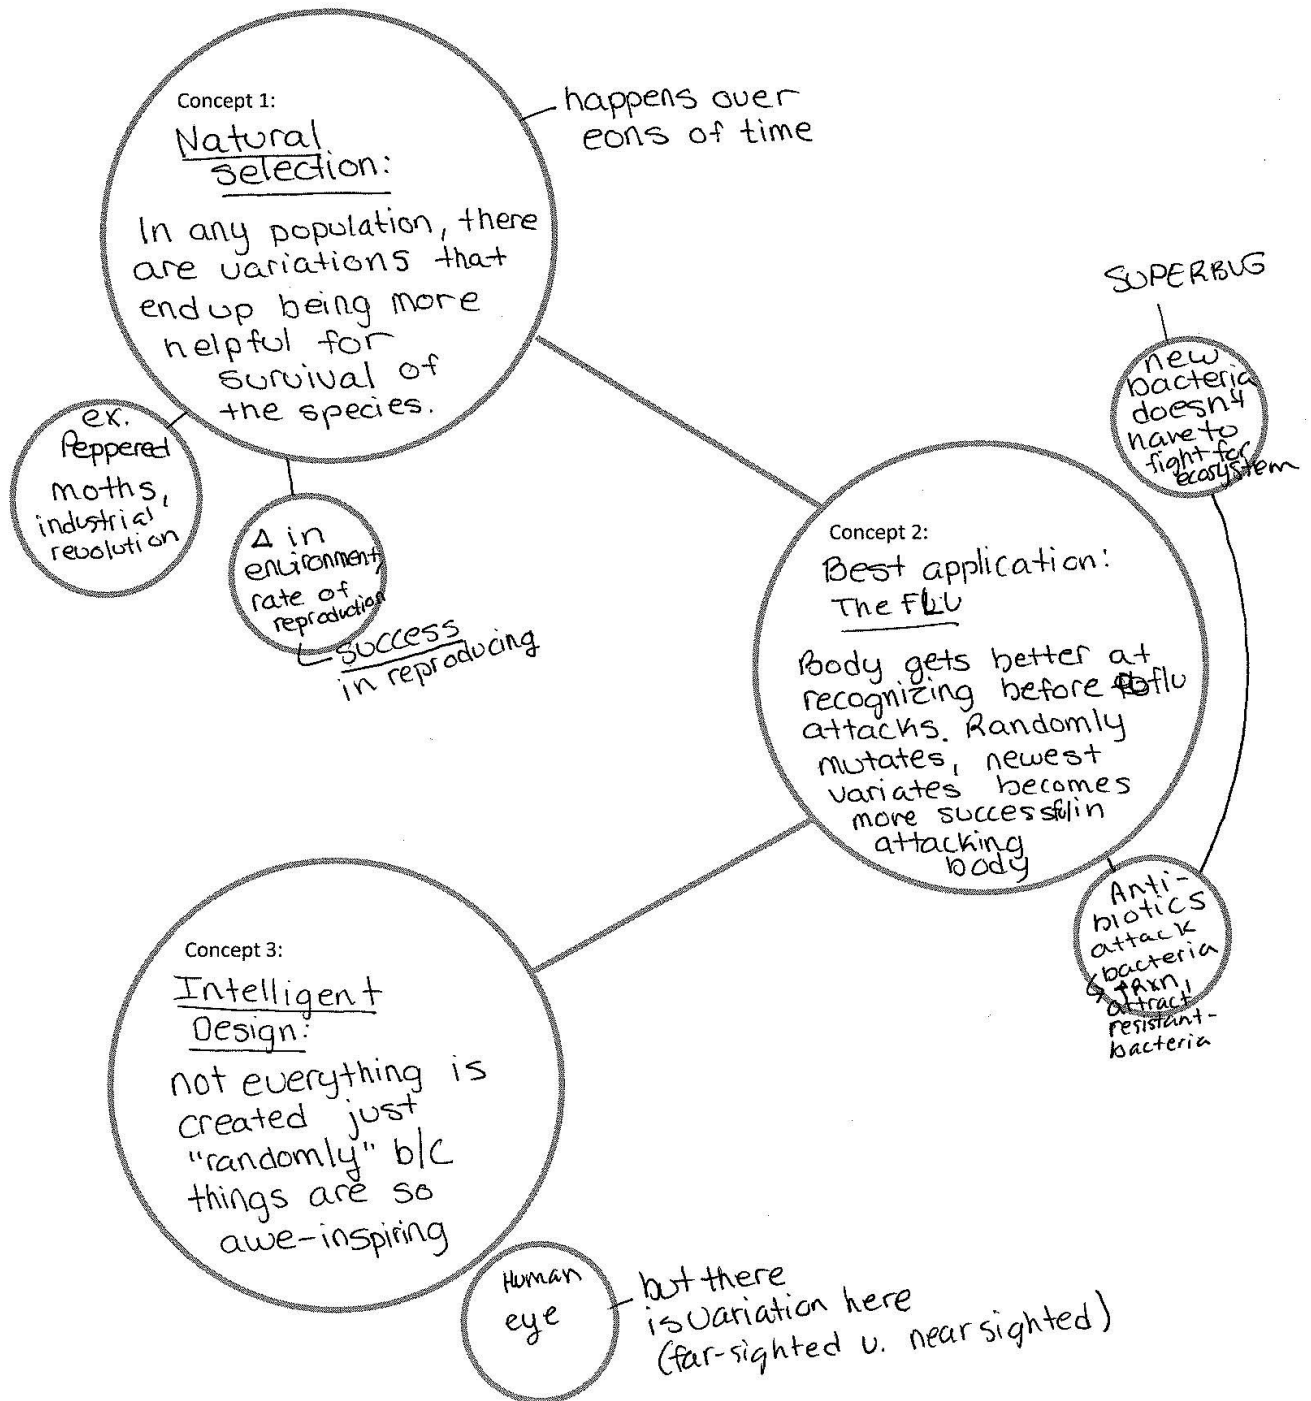

DATE:	What are the main concepts in this lecture?	Questions to Ask:
TOPIC(S): Cardiopathologies	1. Risk factors of cardiopathologies	Why do β -blockers work for some pathologies but not others?
CLASS: anatomy	2. Symptoms of cardiopathologies	
	3. Treatment of cardiopathologies	

Theory/Concept:	Definition:	Characteristic 1: RISK FACTORS	Characteristic 2: SYMPTOMS	Characteristic 3: Treatment
Coronary artery disease	vessels that provide blood to the \heartsuit get clogged by cholesterol causing atherosclerosis, blood can't get through	Framingham Heart Study • hypertension modifiable: cholesterol (LDL) fatty acids non-modifiable: age, sex, race, genes	• chest pain (crushing pain) • radiated pain • nausea/vomiting • shortness of breath	• "clot-busting" meds (aspirin) • β -blockers • Nitrates • anticoagulants
Stroke (Ischemic)	75% of all strokes 1. embolism (traveling mass) 2. thrombotic (happens in spot, doesn't travel) blood cut off by clot, brain tissue dies	• atherosclerosis • see CAD	• numbness/weakness • Trouble speaking or comprehension	• aspirin • Thrombolytic
Stroke (Hemorrhagic)	Trauma causes vessels to break, causes cascade of brain death	• aneurysm • arteriovenous	• Trouble seeing w/ one or both eyes • Dizziness	• anti-hypertensive • head elevated • lower head pressure
Cardiomyopathy	Issue with valves of the \heartsuit , causing power failure, decreased pumping, or a blockage	• diet (\uparrow Na) • alcohol/drug abuse • viral infections	• increased breathing • edema • weakness	• low salt diet, • diuretics • ace inhibitors • β -blockers

The Mind Map

DATE:	What are the main concepts in this lecture?
TOPIC(S): Topics around evolution	1. evolution vs. natural selection
CLASS: 212	2. modern day natural selection/variance
	3. Intelligent Design Controversy

The Outline

DATE:	What are the main concepts in this lecture?	
TOPIC(S): <i>Birth</i>	1. What a massive star is	
Death of massive stars	2. How stars' radius get bigger	
CLASS:	3. Why Iron is the last core to form	
Questions to Ask:	Class Notes:	References:
What is happening during H-Fusion?	<p>massive = $> 9 \times \text{Sun}$</p> <p>Review: gravity pulls hydrogen atoms together \rightarrow H-Fusion (a plasma) [Happens @ 10ml K]</p>	pg. 83
What's the reason behind this order of elements?	<ul style="list-style-type: none"> \uparrow density, \uparrow pressure (gravity) \Rightarrow Release energy \downarrow bigger radius $\text{H} \rightarrow \text{He} \rightarrow \text{C} \rightarrow \text{Ne}$ every element starts fusing until it releases energy and forms the next core 	Lec. 5 (5/23)
Fe is endothermic?	<ul style="list-style-type: none"> keeps going until Fe \rightarrow you can't fuse iron to iron, requires energy * How the heavier elements form 	pg. 87
Why Ni w/ Fe?	<ul style="list-style-type: none"> will also form Ni in Fe core 	
Words & Theories to Define:	Summarize and Make Connections:	
Massive Star Ignition mechanism endothermic Supernova	<p>massive stars go through the same process as regular stars, only they have more heat/energy. B/c B/c of the \uparrow energy, more atoms can fuse, and \uparrow fusion \rightarrow \uparrow release in energy. This keeps going until iron b/c iron can't fuse without extra energy in. This is b/c Fe is a stable metal & fusion \downarrow stability.</p>	

The Storyboard

DATE:	What are the main concepts in this lecture?
TOPIC(S): Origins of agriculture	1. How ag. was born
CLASS:	2. Benefits of being born
	3. WHY THEN & WHERE

		1. end of ice age 2. more evolved cognitive brains 3. more demand for food	
<u>Birth of agricultural:</u> • Domesticated animals • made animals more robust • made plants harvest more predictable	<u>FIRST BENEFIT:</u> more robust + predictable food means more reproduction	<u>WHY BORN THEN:</u> <u>WHERE:</u> Syria, china, Andes, midwest, Savannah	<u>SECOND BENEFIT:</u> Specialization, Conflict dominance, Property

Questions to Ask:	How the Concepts are Related to the Bigger Picture:	References:
What was the domestication process like? How did ice age affect ag. more specifically?	<p>200,000 years</p> <p>PALED MESO NEO</p> <p>TIME LINE HOMO SAPIENS HAVE BEEN ON THE EARTH</p> <p>Ice age Agriculture born Pyramids Roman Emp.</p>	chapter 5, Lecture 7+8
